

CHECKBOX

Checkboxes are most commonly used to give users a way to make a range of selections (zero, one, or multiple). They can be used:

- When a user can select any number of choices from a set list.
- When users need to see all the available options at a glance.

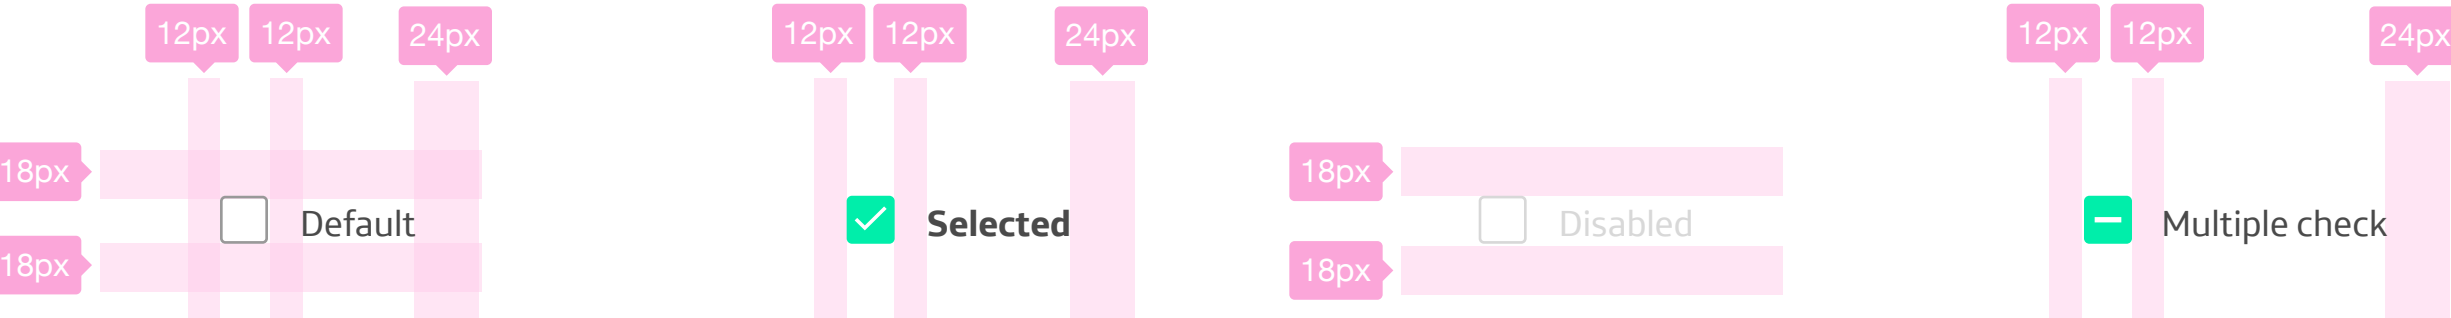

States

These are the different states you can find the checkbox component.

Spacing

The vertical spacing starts from the path limit of the longest option. For more than three options, the checkboxes should be disposed in:

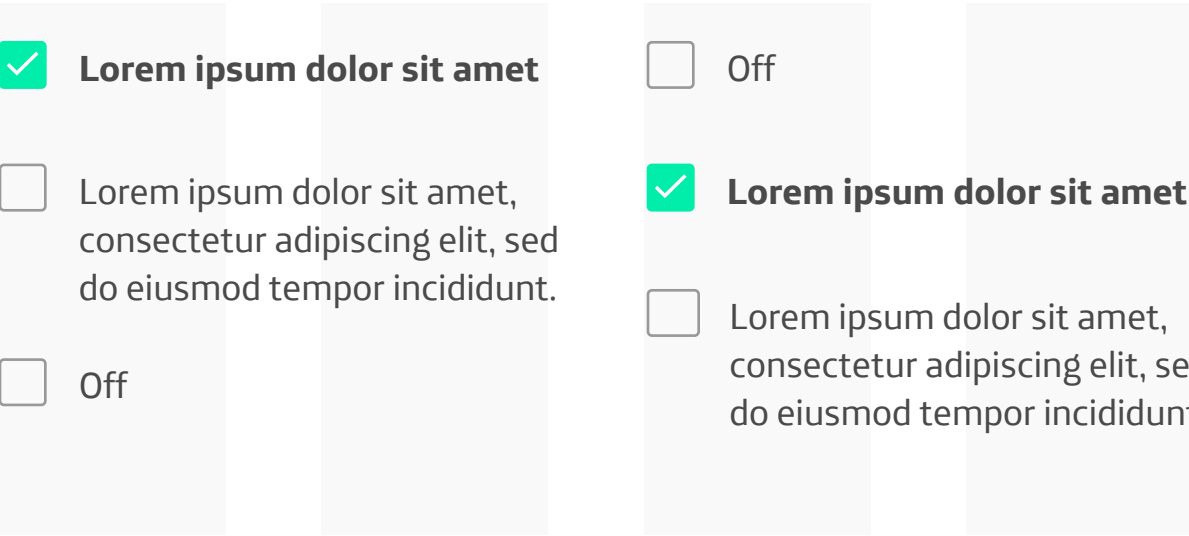

- Mobile: 2 columns.
- Tablet: 2 - 4 columns.
- Desktop: 2 - 4 - 8 columns.

You can find more info about the column system in the [Layout page](#).
